

**Brother introduces Innovative
Seam Construction “ISC”
without Sewing**

BM-2000
Bonding Machine

Various designs can be created with Brother "ISC" technology

The applying of adhesive and the bonding of the cloth are performed at the same time. This contributes to the creation of new designs not limited by the press mold.

This technology can also process tubular seams

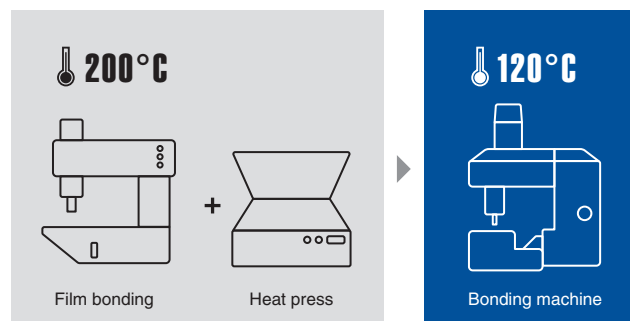

The slender cylinder design of the BM-2000 bonding machine increases the possibilities of use such as long sleeves for ladies' garments.

* Machine cylinder circumference 160mm

Anyone can more easily and beautifully create seams without sewing

The smooth curve design can be created beautifully without exposing the adhesive at the cloth edge by controlling fabric edge positioning with sensor technology.

Greater fabric choices are now possible

Since the temperature of the adhesive is only 120 degrees low, you can select the fabric without concern for damage due to heat and shine. This provides a wider range of fabrics possible for your designs.

Creating stress-free comfort garments with a high fit feeling

High fit feeling and stress-free comfort are achieved by using the BM-2000 and an in-house developed adhesive. Peel strength is 1.5 times higher than conventional tape type, and 1.5% improvement in elongation recovery rate.

Please read instruction manual before using the machine for safety operation.

- Product specifications are subject to change for improvement without notice.

- Photographs are for illustration purpose. They may not represent actual operating conditions and may display optional parts.
