MK 18 / 18S

### Automatic button shank wrapping machine

Compact And Portable

MK 18 shown with mobile phone

Thread saving - revolutionary design to reduce thread waste
= up to 20% extra buttons per cone over any other button wrapping machine.

Automatic waste extraction
= less downtime due to cleaning and maintenance.
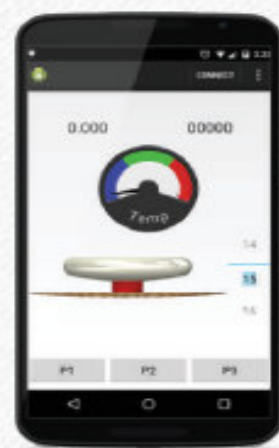

Unique high speed threading of machine
= simple and fast change of colours

App control
= user friendly machine control, diagnostics, production data etc. from a mobile phone
![MMS logo]

The APP home screen enables the operator or technician to access one of three different preset programs. Displayed to the right of the button picture are the number of wraps currently selected. The gauge shows the current temperature reading of the heating fork. On the top left is displayed a cycle timer and the top right is the batch counter.

Various other screen can be easily accessed. This screen shows the diagnostics page for the thread bonding device. By touching the various components on the screen the actual components will move inside the machine. Other screens give the possibility to pre set the 3 programs, alter the bonding time and update the software. Many more features will be built in as time goes on and these will be updateable via the MMS APP.
